

Machines Can Support the Law Legal Practice in Estonia

Heidi Leppikus

Tallinn 2025

Not All Machine Decisions Are AI

- **Technology should handle routine, rule-based tasks.**
- **Automatic data exchange** between registers keeps Land Register information up to date.
- **Examples:**
 - Address or land use updated from cadastre data.
 - Name changes updated from the Population Register.
- **Process simplification:** automatic fee checks and use of metadata to support registry work.

Where AI Can Add Real Value for Citizens

- **Estonia has a strong political ambition to adopt AI** in the public sector.
- **A legal chatbot** is under development, and its integration also into the Land Register public portal is being considered
- AI-based chatbots could assist users by providing:
 - Guidance on portal use
 - Law-based information and basic legal advice
