Artificial Intelligence in Legal Practice: Clients' perspective

Ilze Piševa, Head of the Information Systems Development Division
of the Court Administration of the Republic of Latvia
11.11.2026.

AI Tools Available to Clients

AI tools are becoming the client's first legal assistant:

- Drafting standard contracts, such as lease or rental agreements
- Assistance with completing and submitting a registration application
- Drafting complaints
- Finding relevant regulations etc.

Benefits

- Consistency and prevention of frequently made errors

Challenges

- Keeping pace with AI-generated applications and documents
- Overreliance on AI

Use of AI Tools: Clients Should Know

Disclosing the use of AI provides transparency and builds trust.

Not all tools are the same:

- Checking spelling and grammar
- Document summarisation
- Case-law and legal information retrieval
- Decision made with the assistance of AI
- Decision made by AI

What information should be available?

The level of transparency should reflect the role AI plays in the outcome.

- What is the purpose of the AI tool?
- What data does it use and for what purpose?
- How is human oversight ensured?
- Who is responsible for final decision?

«Pastāvēs, kas pārvērtīsies!»
«He who changes, shall remain!»
